1 EMAG VERTICAL TWO SPINDLE BALL TRACK MILLING AND TURNING CENTRE VSC 250TWIN KBG

1.1 BASIC MACHINE

1.1.1 1 MACHINE BED

The swivelling axis with housing for the milling spindle is integrated in the machine bed. The machine bed manufactured from high quality Mineralit (cast granite) guarantees superior thermal stability and excellent dampening characteristics. Mineralit has excellent vibration dampening properties which are six to eight times better than cast iron. The large distance between the two high precision pre-stressed linear roller guideways of the X-axis guarantees high accuracy and high dynamics. The guideways are outside the working area and therefore require no protective covers.

1.1.2 1 MACHINING AREA

The machining area is effectively separated from the load/unload area by a partition wall facing the pick-up station. A large door at the front of the machine provides access to the machining area. The door features a safety glass window to DIN EN ISO 23125:2010 specification. A inspection lamp is installed in the machining area.

1.1.3 1 MULTI-FUNCTIONAL CROSS-SLIDE

This unit is equipped with two separate axes (X and Z) per spindle. Both spindles are controlled independently by the CNC to achieve separate tool correction. High rapid feed enable short idle times by component load/unload and gauging. The axes drives are quick reaction frequency controlled service free AC motors which drive the slides over high precision ballscrew spindles. The X- and Z-axis are equipped with completely enclosed linear measuring systems. On activation of the emergency-off switch or in case of power failure a feed motor with integrated brake will stop the vertical axis.

1.1.4 2 MOTOR SPINDLES

Each spindle headstock with motor spindle.
The motor spindles are a high dynamic frequency controlled service free AC asynchronous spindle motors.
High degree of spindle rigidity due to triple bearing support over a short distance. Precision shoulder bearings arranged in tandem (double-O). Additional bearing at spindle end for length compensation. All bearings are lifetime lubricated and thus maintenance free.
Sealing air to prevent dirt from penetrating from the outside.
The guideway system in the Z axis is equipped with hydrostatic bearings for compensation the cutting forces which guarantee excellent guideway quality by minimum friction.
Thermo-symmetrical design and integrated coolant system guarantee constantly maintained accuracy.
Positioning accuracy of spindle: +/- 0,05 angular degrees (M19)
+/- 0,01 angular degrees (C-axis)
With electro-hydraulic spindle locking.

1.3.10 CHUCKING SYSTEM

1.3.11	2	ROTATING SOLID CENTRE HYDRAULIC CHUCKING CYLINDER for spindle nose 6. Max. drawbar force 2950 daN at 60 bar. The clamping pressure is manually infinitely adjustable and controlled by a pressure switch. The clamping cylinder stroke is controlled by a linear measuring system.	5.350,00 €
1.3.12	2	WORKPIECE POSITION MONITORING, (AIR SENSING) The position of the workpiece in the clamping fixture is monitored by measuring the air pressure between the part stop and the component. This establishes contact accuracy. Inaccuracies on the workpiece resulting from deformation of clamping fixture or workpiece etc., are not recognised. The air is supplied by one or more nozzles (depending on clamping fixture type). The pressure is measured with a pressure switch. The air supply is controlled by a directional valve. - Toolinspect (turning, milling), - Zinngrebe (only VLC + grinding)
The control system is designed for a maximum ambient temperature of 45° C
EMAG ADD-ON FUNCTIONS:
Machine-specific documentation of functions and parameters is available directly on the control unit. (PDF display)
Automatic return to the home position upon machine error. Error recovery is a simple one button process.
First run high speed traverse is at a reduced speed from home to the first cut. Reduced speed allows you to avoid a collision and save damaged equipment and reprogramming costs.
Internal measuring probe with collision monitoring on the traversing movements (Option)
Automatic workpiece gaging when switching to a replacement tool or tool insert (Option)
Automatic filling and emptying of the entire machine.
"Optional Stop" (M01) allows you to make a programmed stop or interrupt production after finishing a part at a desired point.
Single cycle: Allows one part to be transferred and machined for setup and tryout purposes.
STRUCTURED WORKPIECE PROGRAMMING:
Division of individual programs into subprograms, e.g. the program for the machining contains only the technology program and not the loading part.
The loading program has individual parameters. Division into machine and work piece specific parameters.
Programmable chuck with length measuring system in the pull rod.
Different clamping situations (Unclamped, Clamped and Over stroke) can be changed by parameter assignment. Displayed by diagnostics menu.
Recording and displaying of the most important production data: work piece counter, shift counter, cycle time, work piece status.
Production of definable batch sizes. The machine stops upon reaching the selected no.
Optimized programming for the turret keeps chips from collecting.
Rinsing of clamping devices after a programmable number of parts
Number and positions of the workpiece carriers can be defined for closed automation.
Lifecycle screen that displays tool wear and tool life.

MACHINING

The determined cycle times result from values, which are based on data and experiences of acknowledged cutting material manufacturers. Changing rough part dimensions, tolerances, material as well as the material hardness are only possible during building and testing of the machine. Changes will only be accepted in written form and in mutual agreement.

PROVISION OF EQUIPMENT AND MATERIALS BY CUSTOMER

All tooling, workholding equipment, parts, etc. are to be supplied to our works free of charge and carriage paid. We wish to point out that we accept no responsibility for the functional capability and working order of any equipment provided.

The functional capability of the provided equipment is the responsibility of the buyer.

In the event of problems, we assure you of our constructive collaboration. Any additional costs arising from modification, optimization, etc. will be charged to the customer. Furthermore, we do not guarantee any quoted machining times in such cases.

When orders cannot be carried out on schedule, caused by material supplied by the customer or if technical problems should occur, the machine will be invoiced on the originally agreed delivery date, when the relevant payment will become due.

PRICES

FCA (Free Carrier). Packing, insurance and transport not included.

The payments are to be made without deduction. With delayed payment the relevant laws apply.

VALIDITY OF PRICES

The prices quoted are valid for 90 days from the date of quotation. Orders placed after this period would be subject to a price increase of 0.5 % per month to cover increases in labour and material costs.

This quotation will replace all previous versions.

TERMS OF PAYMENT

100 % of invoice value against irrevocable Letter of Credit payable as follows:

30 % of L/C-value after opening of the L/C as advance payment against simple receipt.

70 % of L/C-value at sight against shipping documents.

All L/C-charges are for buyer's account. L/C must be opened latest 30 days after order confirmation

RETENTION OF TITLE

The machine will remain the property of the builder until complete payment is received from the buyer.

PERIOD OF LIABILITY FOR DEFECTS

12 months at single shift.

The period of liability for defects starts with the final acceptance, but no later than 3 months from delivery, and does not apply to wear and tear parts.

Apart from any possible penalties defined in our terms and conditions, no further claims for damages, consequential damages, etc., will be entertained.

WORKPIECES FOR MACHINE ACCEPTANCE

Both, pre-acceptance and final acceptance tests are carried out with either an EMAG test component to VDI standard, or the workpiece specified by the customer's order.

The customer will supply an agreed number of workpieces for machining process optimisation and preacceptance tests.

These workpieces must be from a single batch and of a quality that corresponds with the relevant manufacturing drawing.

For preparatory work and preliminary machine acceptance the customer will, at the agreed time, supply EMAG free of charge with a sufficient number of sample workpieces of a quality that corresponds with the relevant manufacturing drawing. Any delay in the supply of these workpieces will result in the machine delivery being delayed and the starting date of a possible delayed machine delivery penalty being deferred accordingly.

FINAL ACCEPTANCE AND FINAL PAYMENT

Final acceptance tests are carried out as soon as the machine has been installed and commissioned.

For this purpose, the buyer has to provide a sufficient number of workpieces, personnel and capacity to measure and evaluate the acceptance components.

Once the machine is taken into production and the agreed component quality and cycle time have been achieved, final acceptance is considered to have taken place.

Where final acceptance of the machine is not possible owing to reasons beyond EMAG's control (missing acceptance components, etc.), final contractual payment falls due immediately.
