1 EMAG VERTICAL TWO SPINDLE BALL TRACK MILLING AND TURNING CENTRE VSC 315 DUO KBU

1.1 BASIC MACHINE

- 1.1.1 1 MINERALIT (CAST GRANITE) MACHINE BED
consisting of two separate sections, to prevent interaction during the machining process. For transport purposes the two sections are mechanically coupled.
The machine bed is manufactured from high quality Mineralit (cast granite) which guarantees superior thermal stability and excellent dampening characteristics. Mineralit has excellent vibration dampening properties which are six to eight times better than cast iron. The large distance between the two high precision pre-stressed linear roller guideways of the X-axis guarantees high accuracy and high dynamics. The guideways are outside the working area and therefore require no protective covers.
- 1.1.2 1 ENERGY CONTAINER WITH CONTROL CABINET
Electrical cabinet, cooled with water/air heat exchanger, equipped to VDE 0113 and EN 13849 and integrated in the over-all machine frame, thus ensuring a totally transportable unit. 400 V / 50 Hz machine voltage.
Other voltage on request.
The central grease supply system for lubrication of the recirculating ballscrews and guideway systems and also the service unit for compressed air supply are integrated in the energy container.
- 1.1.3 1 CNC-CONTROL SIEMENS
According to control specification.
- 1.1.4 1 HYDRAULIC UNIT
The hydraulic unit is equipped with a self regulating pump.
Supply 15 l/min (at 70 bar)
Tank capacity 63 l
- 1.1.5 1 COOLING UNIT (15 KW, water - air)
A cooling unit controls the thermal stability of the machine. Spindle bearings, drive unit and motor spindle for milling head are maintained at ambient temperature (10°C - 40°C).
Cooling capacity: 15 kW
- 1.1.6 1 MACHINE ENCLOSURE
The machining area is effectively separated from the load/unload area by the two side walls of the Mineralit machine base and a sliding door to the pick-up station.
An additional bellows completes the working area when loading and unloading the main spindle. Vapors generated during processing can't get into the environment.
A large door at the front of the machine provides access to the machining area (one for each spindle). The doors are equipped with a safety glass window to DIN EN ISO 23125:2010 specification.
Two inspection lamps are installed in each machining area (one at the B-axis and one at the spindle headstock cover traveling in X)

- 1.1.7 2 **MULTI-FUNCTIONAL CROSS-SLIDE WITH Y-AXIS**
For the complete machining with driven tools or with drilling, milling, reaming or grinding spindles.
Large stroke of the Y-axis.
This unit is equipped with three axes (X, Y and Z) for each spindle. Both spindles can be programmed independently via the CNC control.
High rapid feed enable short idle times by component load/unload and gauging (optionally).
The axes drives are quick reaction frequency controlled service free servomotors which drive the slides over high precision ballscrew spindles. The X-, Y- and Z-axis are equipped with completely enclosed linear measuring systems.
On activation of the emergency-stop or in case of power failure, a brake will stop the vertical axis.
- 1.1.8 2 **MOTOR SPINDLE**
Spindle headstock unit with motor spindle
The motor spindle is a high dynamic frequency controlled service free AC synchronous spindle motor.
High degree of spindle rigidity due to triple bearing support over a short distance.
Precision shoulder bearings arranged in tandem (double-O). Additional bearing at spindle end for length compensation. All bearings are lifetime lubricated and thus maintenance free.
Sealing air to prevent dirt from penetrating from the outside.
The guideway system in the Z axis is equipped with hydrostatic bearings for compensation the cutting forces which guarantee excellent guideway quality by minimum friction.
Thermo-symmetrical design and integrated coolant system guarantee constantly maintained accuracy.
Positioning accuracy of spindle: +/- 0,01 angular degrees (C-axis)
Electro-hydraulic spindle locking optionally.
- 1.1.9 2 **MILLING HEAD FOR MILLING OF BALL GROOVES**
with 2 milling spindles
consisting of:
one axis, NC controlled swivelling unit (B-axis)
Swivelling housing guided by roller bearings in the side walls of the machine base.
Swivelling angle -30° to +90° (120°)
Swivelling drive by torque drive. Direct measuring system.
- 2 MOTOR SPINDLES HPC190 (manually tool clamping)
Max. power 40 % ED kW 15
Torque at 40 % ED Nm 67
Max. spindle speed rpm 6.000
Full power at spindle speed rpm 3.000
Spindle taper DIN 69893 HSK C63 / F80
Fluid-cooled spindle housing. Hybrid bearing.
Lifetime lubricated. Temperature controlled.
Rotating components are precision-balanced in two planes.
Coolant supply to tool holder pocket with minimal quantity lubrication max. 10 bar.
Pneumatic spindle nose cleaning device. Air seal between spindle and housing.
(warranty period 18 months)

EMAG ADD-ON FUNCTIONS:

Machine-specific documentation of functions and parameters is available directly on the
control unit. (PDF display)

Automatic return to the home position upon machine error. Error recovery is a simple
one button process.

First run high speed traverse is at a reduced speed from home to the first cut. Reduced
speed allows you to avoid a collision and save damaged equipment and reprogramming
costs.

Internal measuring probe with collision monitoring on the traversing movements
(Option)

Automatic workpiece gaging when switching to a replacement tool or tool insert (Option)

Automatic filling and emptying of the entire machine.

"Optional Stop" (M01) allows you to make a programmed stop or interrupt production
after finishing a part at a desired point.

Single cycle: Allows one part to be transferred and machined for setup and tryout
purposes.

STRUCTURED WORKPIECE PROGRAMMING:

Division of individual programs into subprograms, e.g. the program for the machining
contains only the technology program and not the loading part.

The loading program has individual parameters. Division into machine and work piece
specific parameters.

Programmable chuck with length measuring system in the pull rod.

Different clamping situations (Unclamped, Clamped and Over stroke) can be changed
by parameter assignment. Displayed by diagnostics menu.

Recording and displaying of the most important production data: work piece counter,
shift counter, cycle time, work piece status, operating hours.

Production of definable batch sizes. The machine stops upon reaching the selected no.

Optimized programming for the turret keeps chips from collecting.

Rinsing of clamping devices after a programmable number of parts

Number and positions of the workpiece carriers can be defined for closed automation.

Lifecycle screen that displays tool wear and tool life.

TERMS OF PAYMENT

100 % of invoice value against irrevocable Letter of Credit payable as follows:
30 % of L/C-value after opening of the L/C as advance payment against simple receipt.
70 % of L/C-value at sight against shipping documents.
All L/C-charges are for buyer's account. L/C must be opened latest 30 days after order confirmation

RETENTION OF TITLE

The machine will remain the property of the builder until complete payment is received from the buyer. Upon placement of order the extended retention of title according to clause 48 of our General Conditions for Sales and Deliveries shall be deemed as agreed.

LIMITATION OF LIABILITY

The liability of the supplier is excluded for indirect damage, defects and consequential damage, or losses, e.g., loss of revenues, downtimes, production stoppages, capital costs, or costs incurred due to operational interruptions. This does not apply to damage willfully caused by the supplier, or in cases of statutory liability, in particular according to the Product Liability Act.

PERIOD OF LIABILITY

Any rights and claims of the buyer caused on defects shall be subject to a limitation period of twelve months. The limitation period starts with the final acceptance, but no later than 3 months from delivery, and does not apply to wear and tear parts.

WORK PIECES FOR MACHINE ACCEPTANCE

Both, pre-acceptance and final acceptance tests are carried out with either an EMAG test component to VDI standard, or the work piece specified by the customer's order.

The customer will supply an agreed number of work pieces for machining process optimisation and pre-acceptance tests. These work pieces must be from a single batch and of a quality that corresponds with the relevant manufacturing drawing. For preparatory work and preliminary machine acceptance the customer will, at the agreed time, supply EMAG free of charge with a sufficient number of sample work pieces of a quality that corresponds with the relevant manufacturing drawing. Any delay in the supply of these work pieces will result in the machine delivery being delayed and the starting date of a possible delayed machine delivery penalty being deferred accordingly.

FINAL ACCEPTANCE AND FINAL PAYMENT

Final acceptance tests are carried out as soon as the machine has been installed and commissioned. For this purpose, the buyer has to provide a sufficient number of work pieces, personnel and capacity to measure and evaluate the acceptance components. Once the machine is taken into production and the agreed component quality and cycle time have been achieved, final acceptance is considered to have taken place. Where final acceptance of the machine is not possible owing to reasons beyond EMAG's control (missing acceptance components, etc.), final contractual payment falls due immediately.
